

**In the Specification**

Please replace the paragraph on page 17, beginning on line 12, with the following amended paragraph:

In embodiments the environment can include another computer system 410, such as a steering system, a navigation system, a safety system, a sensor system, an alarm system, a maintenance system, a communications system or an entertainment system. In some cases the environment can contain seats, with light systems disposed to illuminate the environments of the seats. In some cases the environment can contain a corridor, wherein the light systems are disposed to illuminate at least one of the ceiling and the floor of the corridor. Referring to Fig. 5, the environment 500 need not be a transportation venue. For example, it could be an entertainment venue, such as theatre, which may have floor lights 504, ceiling lights 502 and lights 508 designed to illuminate particular locations, such as seats, screens, actors, or the like. Of course, a transportation environment is, in many cases, also an entertainment venue, so it shares many characteristics, such as seats, aisles, screens, and lights.

Please replace the paragraph on page 18, beginning on line 10, with the following amended paragraph:

Using the two-way communication facility of the connector 404, the control system 408 can control the lights 402 in response to a wide range of inputs, whether programmed by the user, provided by other computer systems 412 410, provided from sensors, or provided from the lights 402.

Please replace the paragraph on page 18, beginning on line 15, with the following amended paragraph:

In embodiments of the methods and systems disclosed herein, there are methods and systems for creating and using customer profiles, taking advantage of the two-way communication facility of the connector 404 and the data storage facility 424 420.
